

Explaining **Github** to a kid

Lets say,
You are a kid
going to school

this is your
backpack

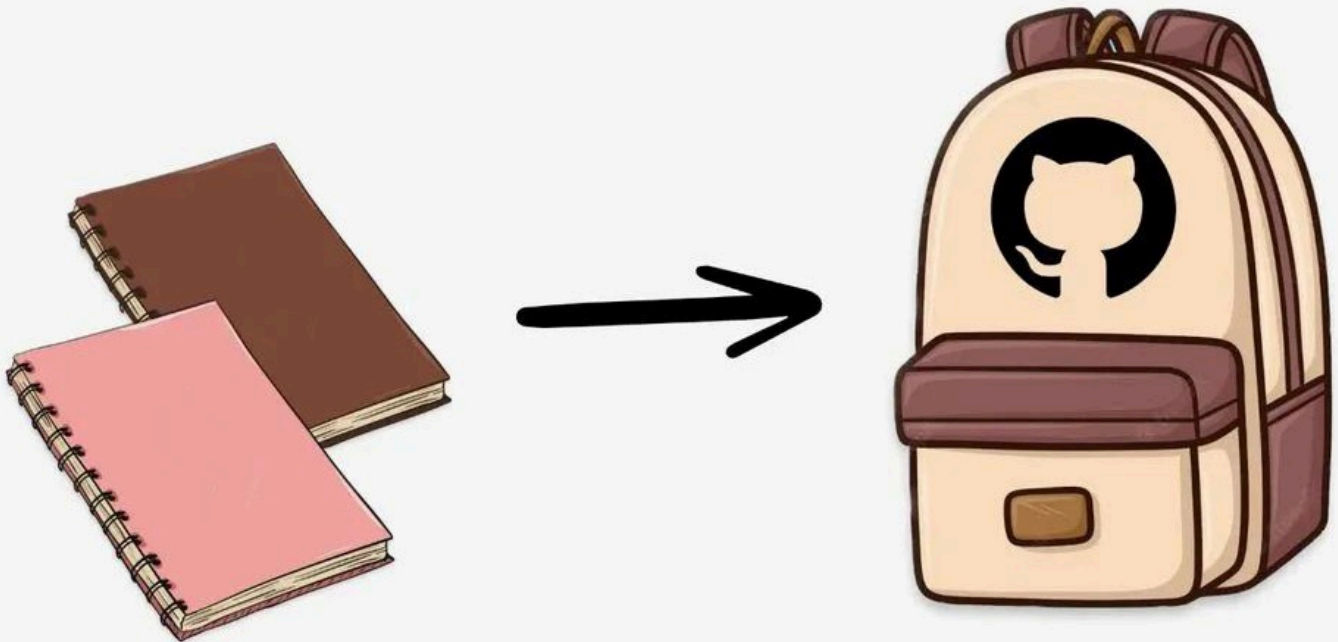

now imagine,
your friends and you
are working on a big
school project

you and your friends
will do homework in
your notebooks

and put inside this
backpack

now, any of your
friend can access
this backpack
and work on your
notebook

you can also see, which friend did
what changes in your notebook

if one of your friend
makes a mistake **✗**

you can go back in
time to when there
was no mistakes

every change is saved as a
version history in github

GitHub helps your group keep
your project work organized
and accessible to everyone

just like this
backpack
